Getting started

Required For Setup

- A [OneSignal Account](#), if you do not already have one
- Your OneSignal App ID, available in [Keys & IDs](#)
- [A Google/Firebase Server API Key](#)
- A device or emulator that has Google Play services installed and updated on it (Device will not subscribe or receive push notifications with out this).

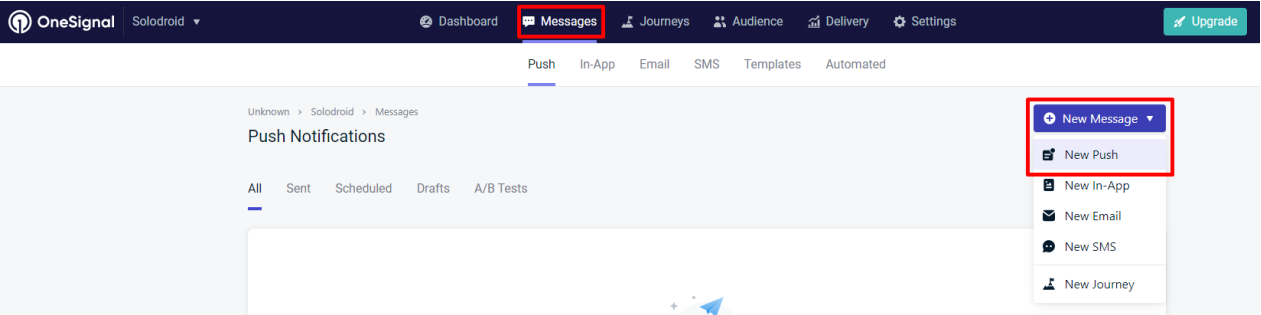

Keys & IDs Setup

- Login to your OneSignal Account and select your app
- Select **SETTINGS** > **Keys & IDs** to get your **OneSignal App ID**
- Open your Android Studio project, go to **res/values/notifications.xml** and put your **OneSignal App ID**

Send notification

Login to your OneSignal Account and select your application, then select the **Messages** menu in your OneSignal account, then click the **New Message > New Push**

The required fields are **Title** and **Message**, you can add other optional fields such as **Image** and **Launch URL** if you want to redirect to opening a specific url in the application when users press the notification they receive.
