

## 2. Code Setup

After purchasing the app you will get a .zip file and unzip it. Inside the **main\_files** folder, you will get a folder named **wordpress\_app**. This is the source code of the app. You have to work on this to set up your app. Now open your IDE and open the **wordpress\_app** folder on your IDE. Wait some time to load the project.

Now go to the IDE terminal and run the following commands one after one :

- Run the following command on the IDE terminal to clean the whole project first.

```
flutter clean
```

- Run the following command on the IDE terminal to get all the required packages.

```
flutter pub get
```

Make sure these commands should be run from the root directory of the code.

PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL

```
○ rakibbhuiyan@Rakibs-Mac-mini app_admin % flutter clean
```

Wait some time to get all the packages. Now, your project is ready for configuration.
