

5. Run the App

Before doing that, Please make sure that you have followed all of the previous steps. Otherwise, it won't work.

Before doing this, connect An Android Emulator from Android Studio or a real Android device or an iOS Simulator from Xcode, or a real iOS device.

Before running the app, clean the project & get the packages by running the following commands one after one:

```
flutter clean
```

```
flutter pub get
```

And finally, run the following command to run the app:

```
flutter run
```
