

Getting Started

Welcome to the Newsfreak Configuration Document. You can configure your WordPress site and the app (Android & iOS) by following this doc.

You can choose any WordPress news/blog theme. The app has no relation to the theme as the app will fetch the data automatically via **WP REST API**.

- Before starting the configuration, Please make sure that your WordPress website is up and running.
- Follow the WORDPRESS SETUP first and then follow the APP SETUP.

Note: We provide installation/reskin service for the Newsfreak app. If you can't do the installation by yourself, we can do that for you. You can email us at contact@mrblab.com for more details.
