

# Migrate to v2.2

## WordPress Setup

- Deactivate the **FCM Push Notification from WP** plugin. This is not required now.
- Install Onesignal Plugin which is added in the **1. Install Plugin**
- From 2.2, **Deactivate & delete** the old **Newsfreak App Functions plugin** and upload and activate the new one which you will get from the updated main\_files folder. The new plugin version is **1.1.2**.

## App Setup

Since many files have been edited for new flutter updates and new configurations have been added, we recommend using the latest code for updating your app.

- Use the latest Flutter version 3.22.x
- Use the latest code
- Follow 2, 3.1, 3.2 (Use your previous Firebase project)
- Follow 3.3, 4 (all)
- Follow 6.1 (Use your previous keystore file)
- Follow 8, 9.1.1, 9.1.2, 10.1 (iOS part only), 10.2
- Follow 11.2 & 11.3 (Update the app code only)
